

FileMaker Pro 16.0.03 and FileMaker Pro Advanced 16.0.03 Release Notes

Software Details

Application

- macOS: Switching to a layout that included a chart caused FileMaker Pro to close unexpectedly.
- macOS High Sierra 10.13: Interaction with a drop-down list was slow.

Network

Addressed the following issues:

- Under certain conditions, reconnecting to a hosted file could corrupt scripts.
- Under certain conditions, committing a record while reconnecting could corrupt the record.

Scripts

Addressed the following issues:

- Windows: A new window that was created by a script trigger was not the active window.
- Windows: A window could be closed when a script with the Allow User Abort script step set to Off was paused.
- Windows: A hidden file became visible after a script from that file was run in another FileMaker Pro file.

Calculations

- Addressed an issue where an unstored calculation based on related records did not update when the related record was modified in a portal and committed using the Enter key.

Who Should Install This Software?

Platform	Product	Version	Use this updater	Languages

	FileMaker Pro 16 Advanced		FileMaker Pro 16.0.3 Advanced Updater (setup.exe)	

APIs, technologies, or features to be deprecated

As **FileMaker Pro** evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. While deprecation does not mean the immediate deletion of an item, **FileMaker** recommends that you migrate your solution away from deprecated technologies, as these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the **FileMaker** Knowledge Base. For information about new, changed, and removed features, see the most up-to-date version of **FileMaker Pro** Help, available on the **FileMaker** website.
