

FileMaker Pro 17.0.4 Advanced Release Notes

This software updates FileMaker Pro 17 Advanced to version 17.0.4 and fixes a bug.

If you are unable to successfully update to FileMaker Pro 17.0.4 Advanced, search the FileMaker Knowledge Base for installation information.

Software details

Addressed an issue where ODBC connections were not closed properly after certain operations were performed.

Important: To ensure that you don't encounter the issue above, you must update all clients to FileMaker Pro 17.0.4 Advanced and FileMaker Go 17.0.5.

APIs, technologies, or features to be deprecated

As FileMaker Pro Advanced evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the FileMaker Knowledge Base. For information about new, changed, and removed features, see

the most up-to-date version of FileMaker Pro Advanced Help, available on the FileMaker website.
