FileMaker Server 19.6.2 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

New features and enhancements

Performance
- FileMaker WebDirect: The overall load time is optimized.

Updated libraries
- FileMaker WebDirect: The following open-source libraries have been updated:
    - Gson is updated to version 2.10
    - Jackson is updated to version 2.14.0

Addressed issues
Performance
- Deleting records from a layout with less than 15 records in List View caused flickering when viewing the same layout in other browser windows.
- FileMaker WebDirect and the FileMaker Data API performance degraded after upgrading to FileMaker Server 19.6.1.

Administrator roles
- Users who signed in to Admin Console using credentials for an administrator role were able to perform Disconnect and Send Message actions on databases that they didn't have access to.

APIs, technologies, or features to be deprecated
As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate

your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the [Knowledge Base](#).
