FileMaker Server 19.6.3 is available as a full installer, which can also upgrade or update an existing installation.

Download the installer from your Electronic Software Download (ESD) page. Or contact our Sales team at: sales@winsoft-international.com

New features and enhancements

Updated libraries
- FileMaker Server: The following open-source libraries have been updated:

    - Socket.io is updated to version 4.5.4.

    - Socket.io-client is updated to version 4.5.4.

Addressed issues

Performance
- Opening a database hosted by FileMaker Server with Claris FileMaker Go took longer than expected.

- Databases hosted by FileMaker Server took longer than expected to open for the first time when they contained a large number of accounts and the network connection experienced delays.

Stability
- Claris FileMaker WebDirect stopped responding when accessing databases that were not yet loaded during error handling.

- Entering the command fmsadmin restart server with typos caused the Admin Server process to stop unexpectedly.

General

- FileMaker WebDirect: Scrolling the layout in List View didn't work when you moved the pointer to a portal with the "Allow vertical scrolling" option disabled.

APIs, technologies, or features to be deprecated

As FileMaker Server evolves, the list of supported technologies, APIs, and features will change. As part of this evolution, certain operating systems versions, hardware, and features may be deprecated in favor of newer ones. Although deprecation does not mean the immediate deletion of an item, you should migrate your solution away from deprecated technologies, because these technologies may be removed in a future version of the product.

For the latest information about deprecated APIs, technologies, and features, search the Knowledge Base.
